RE: Site Inspection, Desert Sandscapes, Black Ridge #1 Mine, S/053/027, Washington County, Utah

Date of Inspection: July 21, 1994
Time of Inspection: 1545-1630
Conditions: Cloudy and Hot
Participants: Larry Gore, BLM; Lynn Kunzler and Travis Jones, DOGM

Purpose of Inspection: Routine inspection while passing through area

There are three quarries onsite. On quarry has been reclaimed. The access road is pre-existing and runs along the bottom of a wash. Since there is little or no topsoil available for salvage, reclamation of the quarries consists of pushing waste rock against the quarry wall, shaping the rocks into a natural looking topography and general cleanup. Seeding should be accomplished on all regraded areas.

The total disturbed area to date is less than $1\frac{1}{2}$ acres. No concerns were noted during this inspection. A photograph was taken of each of the three quarries.
